Data: WANG H, TONG L, ZHANG X</p>	<p>E(10-E4B) J(4-E4B) N(2-D1, 3-B2, 3-D1, 3-E)</p>
<p>A catalyst for preparing 1,4-butanediol by gas-phase hydrogenating maleic anhydride and/or its ester has the formula of $\text{CuCr}_a\text{Mn}_b\text{Zn}_c\text{O}_x$, where $a=0.8-1.5$, $b=0.05-0.8$, $c=0.05-1$ and x is the number of oxygen atoms needed for satisfying the atom valences of metals. When the volume space speed of the gas is up to 70/hr, the transform rate of anhydride and/or its ester is up to 99 % or more and the selectivity of 1,4-butanediol is up to 80 mol % or more.
